

ATM-40

40/5A Low Voltage Mini Current Transformer

Features

Current transformers are designed to shrink the primary circuit current within the conversion ratio and transfer it to secondary circuit elements and to isolate the measurement and protection devices they are connected to from the high voltage system.

- Accuracy Class : 1
- Primary Current : 40A
- Secondary Current : 5A
- Output Power : 1VA
- Busbar Dimension : \varnothing 20mm.
